

Free Testing

Free well water and urine testing for heavy metals, pesticides, and consumer products.

The Utah Health Department and 4 Corners States Biomonitoring Consortium is conducting a study to determine how the body metabolizes certain heavy metals found in well water, as well as pesticides and household products found in urine. We would like to find Utah residents who consume well water, or anyone who would like to know their exposure to pesticides and plastics. If interested, volunteers will be asked to answer a brief survey to assess exposures and to give a water and urine sample which will be tested only for contaminants of interest. All testing is provided free of charge and results will be mailed to each participant. If you are interested in participating, give us a call!

If interested contact Kerry Miley or Jackson Geary at 801-965-2567 or kmiley@utah.gov Space is limited to 30 participants
