

Free Well Water Testing and Biomonitoring

Hi Bluff Neighbors!

Are you interested in **free drinking water quality tests**? We will be in your area this weekend looking for volunteer participants!

- The Four Corners States (Utah, New Mexico, Colorado and Arizona) are conducting a study measuring the relationship between heavy metals found in private well drinking water and heavy metals found in urine.
- We would love your help! In order to participate you must have a private well, you must be willing to give a water sample and a urine sample and fill out a short questionnaire to assess possible exposures to heavy metals.
- In addition to having free well water testing, you will be provided with your results along with free education on how to reduce excess exposure to metals that can be dangerous.

We will be in your area from Thursday, **May 19 thru Sunday, May 22**. Please call to schedule an appointment today!

Carrie Butler -**801-347-6739** to schedule an appointment or with any questions.
